

## Steps to a successful farmerswife implementation

Below we outline the main farmerswife implementation steps. These steps can be completed in different ways according to the desired method:

**Parallel** - the new resource scheduler software is implemented parallel to an existing system and will be replacing the existing system at a certain point.

**Phased** - the new system will replace an existing system gradually and in smaller steps.

**Pilot** - a pilot group will be using the setup before, then switching to the live system.

**Direct** - the new software is directly going live without phasing out the old system.

### 5 steps to create a successful software implementation plan

#### 1. Preparation and Planning

Good software implementation planning is very important for the successful

implementation of new business software. Goals should be determined along with the objectives the new systems needs to fulfil. Our team of experienced Product Specialists will guide you in this initial step.

#### 2. Knowledge Transfer

Implementing a new system can also be an opportunity to study and review current workflows, as well as implementing new processes that will be identified during this period.

#### 3. Database Configuration and Installation/Setup

Depending on the purchase model we'll either send all the information and installer for local installation or we'll prepare your cloud hosted

system and send login information.

#### 4. Implementation and Workshop/Training

Software on-boarding is the phase where users are being trained in successfully using the new software.

#### 5. Post training follow-up

After the defined go-live date our product specialists are in close touch to make sure you have a smooth start in using farmerswife. We'll setup goals, milestones and regular follow up meetings until you're fully up and running.

*"Implementing a new software can become very time-consuming and expensive, that's why it's crucial to create an implementation plan before the process starts."*

### About farmerswife

- farmerswife is the leading provider of scheduling and facility management Software.
